

A simple guide to AI jargon for in-house lawyers

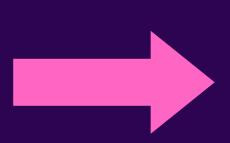

Part 1/2

By Sarah Irwin

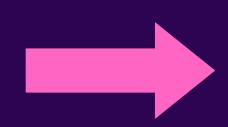

ITGC

Generative AI

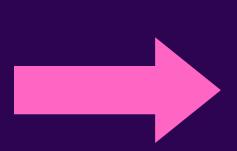

Umbrella term for a set of algorithms capable of generating seemingly new, realistic content or responses (e.g. text, imagery, synthetic data) from the input data they were trained on

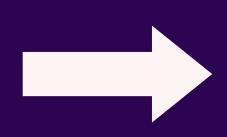

A category of generative AI models with a specialized focus on text-based data. Trained on huge text datasets, LLMs can understand and respond to human language in a very life-like way

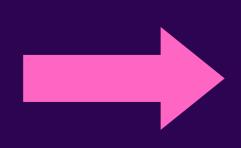

Examples: ChatGPT (OpenAI), Bing (Microsoft), Bard (Google)

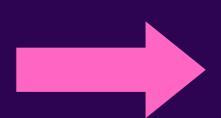

ChatGPT

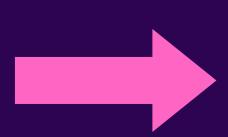

A text-generating chatbot. The best known example of an LLM that uses deep learning techniques to generate human-like answers to text-based prompts

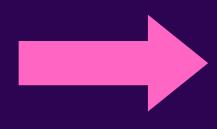

NLP

Natural Language Processing

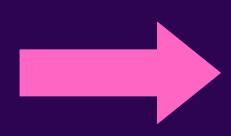

A branch of AI that can help computers understand, generate and manipulate human language. NLP applications can for instance analyze customer feedback, social media, and reviews to understand sentiment and gather insights for product development and marketing.

Great... now make it relevant to in-house lawyers

Sure! Here are some perks of using AI in your in-house legal function:

1. **Greater efficiency** (AI can automate repetitive tasks, reduce manual labour and human error)

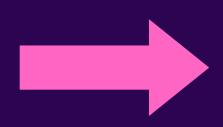

2. **Cost reduction** (see 1 above, plus some AI tools help you manage spend)

3. Faster decision-making (AI can analyse tons of data quickly and accurately)

4. Analytics & performance (AI can give you data and actionable insights on where you can improve)

5. **Reputation** (AI = speed and simplicity which business users love)

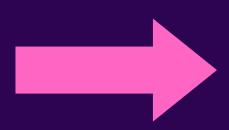

6. **Eliminating burnout** (through fixing all of the above and more)

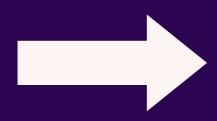

What about contracting specifically?

AI and LLMs can be used for all kinds of contracting work:

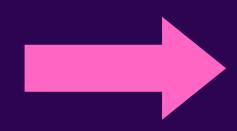

- Creating templates
- General document drafting
- Contract analysis
- Smart clause library for editing
- Instant suggestions, redlines and comments
- Intelligent contract analysis
- Key metadata extraction
- Managing post-execution obligations

How else can we use AI & LLMs?

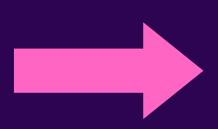

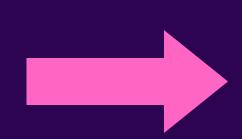

Risk assessment & management, to monitor regulatory changes, customer service, resolving queries and issues in real time, fraud detection

Great but can I get actual names of tools that can do all that?

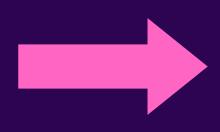

I'll share some companies you should check out that can help you leverage AI in different aspects of your in-house legal work (intake, presentations, spend management, spreadsheets, CLM etc)!

I am Sarah Irwin

I am an ex GC turned entrepreneur for start ups

And community builder for in-house lawyers at ITGC

Follow me for insights on:

- Building and running an in-house legal team
- Leveraging LinkedIn to generate more top of funnel & brand awareness
- Scaling your start up
